## INTRODUCTION

ScriptGuideRX is pleased to provide the 2013 Managed Formulary. The formulary contains drugs that are safe and effective. This is an informational tool for physicians, pharmacists, and members designed to assist in selecting clinically appropriate and cost-effective products.

## NOTICE

The information contained in this formulary is provided by ScriptGuideRX solely for the convenience of medical providers and members. ScriptGuideRX does not warrant or assure accuracy of this information, nor is it intended to be comprehensive in nature. This formulary is not intended to be a substitute for the knowledge, expertise, skill or judgment of the medical provider in their choice of prescription drugs. ScriptGuideRX assumes no responsibility for the actions or omissions of any medical provider based upon reliance, in whole or in part, on the information contained herein. The medical provider should consult the drug manufacturer's product literature or standard references for more detailed information.

## SCRIPTGUIDERX PHARMACY & THERAPEUTICS COMMITTEE (P&T)

ScriptGuideRX's Pharmacy & Therapeutic Committee meets regularly to review and recommend medications for formulary consideration and the formulary is updated three times a year. The Committee considers clinical information on drugs that are new to the market and drugs that are typically included in an outpatient pharmacy benefit. This assures that the formulary remains responsive to patient and physician needs. The Committee is composed of physicians, pharmacists, and health care professionals. The Committee also uses reference materials from our Pharmacy Benefits Manager's Pharmacy and Therapeutics Advisory Panel.

## PRODUCT SELECTION CRITERIA

The primary goal of the Pharmacy & Therapeutic Committee is to maintain and update the formulary based upon an objective analysis of the safety, efficacy, approved indications, adverse effects, contraindications, patient administration/compliance considerations and cost effectiveness of available drugs. When a drug is considered for formulary inclusion, it will be reviewed relative to similar drugs including those currently on the SGRX Managed Formulary.

## GENERIC SUBSTITUTION

Plans using this formulary mandate the use of generic drugs. Generic drug substitution is the process by which a generic equivalent is dispensed rather than the brand-name product. The brand names listed in the formulary are for reference only. Drugs listed in **bold print** have FDA approved generic equivalents available, and the generic product will be dispensed. **Brand-name drugs that have generic equivalents that physicians prescribe as dispense as written (DAW) or members request to be dispensed as written are subject to a 100% copay to the member.**

## SPECIALTY DRUG PROGRAM - PRIOR AUTHORIZATION REQUIRED

The fax number for prior authorization requests is 313-216-1825. A Prior Authorization form must be completed and faxed to ScriptGuideRX (SGRX) with supporting documentation. If approved, SGRX will notify the appropriate specialty pharmacy and the prescribing physician who then faxes their standard prescription form that contains the physician's name, address, phone, fax and DEA number to the specialty pharmacy. The patient's full name and date of birth must also be included.

Once the order is received, the specialty pharmacy will contact the doctor's office to verify receipt of the prescription. Once the enrollment process is completed the medication is shipped directly to the physician's office or the patient's home or designated alternative. All packages are individually marked for each patient and refrigerated items are shipped in insulated containers. Where appropriate, each shipment includes needles, syringes and alcohol swabs.

If you have any questions about this or for any problems, please contact ScriptGuideRX at 877-794-3576. Once a member is enrolled in the specialty program, questions on their prescription or the shipment of their medication can be directed to the specialty pharmacy.

## PRIOR AUTHORIZATION

Some medications require a prior authorization (PA) to be covered to ensure members receive the most appropriate and cost-effective drug therapy. The criteria for authorization are based on current medical information and the recommendations of ScriptGuideRX's Pharmacy and Therapeutics Committee.

Drugs indicated with a (PA) require a Prior Authorization for coverage. Prescribers may complete a request for Prior Authorization form that can be found on ScriptGuideRX's website at [www.scriptguiderx.com](http://www.scriptguiderx.com) or by calling ScriptGuideRX Member Services at 877-794-3576 to have a form faxed to them. The completed Prior Authorization form should be faxed to 313-216-1825.

**Members will be required to pay the full ScriptGuideRX network cost of the drug if their physician does not obtain prior authorization for any drug requiring a prior authorization. ScriptGuideRX will not consider a request for prior authorization for a drug that's not included on the Managed Formulary.**

## STEP THERAPY

Step Therapy (ST) requires that front line drugs (Generic) are tried first - usually generic medications, which have been proven to be safe and effective. They will save the member and the plan money because they have the lowest copay and cost less. Back up drugs (Brand) are brand-name medications and are recommended only if a Generic drug does not work. These alternative drugs are covered but they have a higher copay. In the case of drugs requiring **step therapy (ST)**, previous treatment with one or more frontline drugs is required. Drugs indicated with an (ST) require that an alternative, first line drug be tried and failed before the requested medication can be covered. The online claims adjudication system will automatically allow for the requested medication to be filled based on electronic claims history indicating that the first line drug was filled.

## LIMITATIONS

Specific medications indicated with a (QL) notation in the formulary have restrictions on the quantity of the medication that will be dispensed. Specific medications indicated with an (AL) notation in the formulary have restrictions on the age of the patient for whom the medication will be dispensed. Medications indicated with a (GL) notation are only FDA approved for use by a particular gender.

## PREFACE

The formulary is a listing of drug products that are eligible for payment by the plan. Products are listed by generic name and brand names are included only as a reference for product recognition. Unless exceptions are noted, generally all applicable dosage forms and strengths of the drug cited are included in the formulary. Extended release formulations (e.g. ext-rel, SR, ER) are not considered formulary drugs unless specified. **Prescription drugs that are prescribed for experimental, investigational or non-FDA approved indications are not covered.**

Drugs not on the SGRX Managed Formulary are available to the member subject to a 100% copay. The only time a brand-name drug is covered is if there are no generic options available for a specific treatment and it's included on the SGRX Managed Formulary.
